Mammals

November 16-20, 1963 (Sibley) Summary: "Cats only - one per night - jumpy."

Nov. 16, 1963 (Bratley) Saw four cats which were very scared.

July 11-16, 1963 (Sibley) Summary: Cats not seen for first two nights and then 2-3 seen each night thereafter.

February 29, 1964 (Huber): "...and chased one cat down."

March 2, 1964 (Sibley) Summary: "One cat run to death."

July 14, 1964 (Sibley) "Huber shot one of two cats seen. A third cat seen during day in Red-footed Booby Colony."

July 15, 1964 (Sibley): "Huber killed one yellow female in buildings near lighthouse by digging it out. I killed one gray female (6 developing fetuses) near the tern colony. It ran only a short way before giving up."

July 16, 1964 (Sibley) Pers. com. - no cats seen.

October, 1964 (Sibley) No cats seen.

Feb. 12-17, 1965 (Hackman) "During the first portion of the island survey two dead birds were found on which the breasts had been eaten off. No other parts of these two birds had been eaten off. This looks suspiciously like the work of a cat."

May 30-June, 1965 (Fleet) Spam Island - collected 8 rats Rattus exulans

Oct. 1-3, 1965 No mammal report at all

April 1966 Reports that previous SIC trips have exterminated all mammals from island.

SOOTY TERN

2 July 11-16, 1963 ----- Sibley: "Large flocks just starting to set down on the ground. On the 13th could find only a few to band. On the 15th the ground was covered with 100's of birds. ^{Est. 2000 FCS} One colony between lagoon and guano heap. Another on area of coral rubble at south end of island.

3 Nov. 16-20, 1963 ----- Sibley: "Large flocks in evening over island (3000 ±)
As many as 500 sitting on ground during the day but none at night.

4 Feb. 27- March 2, 1964 - Sibley: " Up to 7000 to 10,000 birds over island. Several thousand sitting on ground for short periods."

July 17, 1964 ----- Sibley : (At night) "Terns were all on eggs and sat very tightly. "

5 July 14-17, 1964 ----- Sibley summary : "40 blood samples, 4 collected. 2500 banded. 3 colonies totaling 50,000 at night, about ~~the~~ half that or less in the day. All three colonies on fresh eggs. A small group with 60 young about to fledge had nested in the lagoon area. "

*Estimated
15,000 eggs FCS*

6 November 10, 1964 ---Sibley: "One fresh (still wet) egg found in large group..."

November 11, 1964 ---Sibley: "Estimated over 3000 in 3 scattered groups. A few nestlings still left. A number of immatures # still left."

November 9-12 1964 ---Sibley summary: "2 collected, 51 banded, 20 blood samples. Estimated 10,000. About 3,000 on ground. 1 fresh egg. Numerous immatures and a few nestlings."
(10± FCS)

February 12-16, 1965 -- ~~Sibley~~, Hackman, summary: estimated 85,000 plus in 5 colonies all with freshly hatched chicks and eggs. 2 collected. 4351 banded, 10 returns.

February 12, 1965 - Hackman, species account: 50 blood samples from a small colony on the south end of the island. This colony, about 1,000 birds, had young just emerging from eggs late in the afternoon. Birds were captured with nets from the fringe of the colony. Hermit crabs were observed attacking several chicks before they had completely emerged from their eggs.

7 Feb. 12-16: Total population 85,000 plus in 5 distinct colonies: 1 on south end of island, 3 along west shore on north end of island. 4 groups with eggs and freshly hatched chicks, 1 group with $\frac{1}{2}$ - $\frac{3}{4}$ grown nestlings. 4351 banded, 10 returns. Almost all adults banded were captured with hand nets. After the initial time the colonies were not entered because of an extremely high mortality rate among freshly hatched chicks due to large numbers of hermit crabs.

Feb. 12 - sampled 100 birds for 50 samples - south end of island.

40,000 nests
estimated FCS

Feb. 13 " At 5 PM we packed up some gear and headed toward the Sooty Tern colonies on the north end of the island. By using nets we were able to band 600 adults before dark. After dark we tried picking birds up off of their nests but the moon was far too bright so we returned to our nets and did an additional 300 birds. It wasn't long before we realized that only one small part of the colony near the guano heap was actually on eggs. Most of the birds were on freshly hatched chicks, which rapidly fell prey to the very abundant Hermit Crabs. Once this was discovered we quickly finished up the loose bands and moved out of the colony completely.

8 May 30-June 1, 1965 -- Sibley, summary: Estimated 40,000 only a few on the ground. 900 banded with 19 returns. 40 blood samples, 6 collected.

May 31, - Sibley, species account: One large group (5,000) on ground. Several

8 other groups circling various areas of the island. Several immatures still present around the guano heap. 900 banded, 19 returns. Estimated 30-40,000 in various flocks.

9. ✓ Oct 1-3, 1965 (Fleet) - colony - almost all were flying immatures (about 4000) saw 20± flying over.

" " " (BAH) at end of breeding cycle, all nestlings appear able to fly. 3000-4000 locals present. Many adults at night. Colony mostly in Sida.

 Estimated 1000 FCS

Nov. 16-20, 1963 ----- Sibley: "Adults uncommon. About 1/4 enough (for number of) nests seen. Concentrated in large colony on West Side with a few scattered around the island. Nest survey -- 46 nests with eggs, none with small young, 387 large young, (63 of these still in white down). 2 immatures and 356 nestlings banded.

4 ✓

Feb. 27- Mar. 2, 1964 -- Sibley: "Estimated 1500-2000. 77 nests with eggs, 1 small young, 1 large young. 100's of fresh nests. Males with throat pouches inflated. 2 returns and 19 recoveries."

5 ✓

Feb. 28, 1964 ----- Clapp: " census run of Greater Frigate colony. Most nests contained nothing and the majority of males had expanded throat pouches. " "One newly laid frigate egg laid in nest in trees to southeast. " (Laid since our arrival and the first nest in this particular area to produce an egg.)

July 14-17, 1964 ----- Sibley summary : "Scattered colonies all along west side with the major colony at the tree clump on west side. Most of young small. Nests in open were only a few inches off the ground in Sida, Portulaca, or other slight elevation. 50 males and 50 females banded. Nest Count :

	Area 1	Area 2 Tree colony	Rest of area	Total
1 egg	333	785	86	1204
young	<u>308</u>	<u>600</u>	<u>40</u>	<u>948</u>
	641	1385	126	2152

Estimated 5000 adults.

5 ✓
July 15, 1964 ----- Hackman : " Found an abnormal Greater Frigate egg while making the nest survey. The egg was about 1/3 normal size and was oval rather than the normal oblong shape. The egg was broken open and found to have no yolk. A male had been tenaciously sitting upon the egg. "

6 ✓
Nov. 11, 1964----Sibley: "...large colony on west side. Numerous immatures present..."

6 ✓
Nov. 9-12, 1964 ---Sibley summary: "2 collected, 20 blood samples, 500 nestlings banded. Estimated 3,000. 19 nests with 1 egg, 1115 with young, over 1,000 immatures."

7 ✓
Feb. 12-16, 1965 --- Hackman Summary: 1310 nests with eggs, 21 nests with small nestlings. Many eggs pipped. Estimated 6,000 adults and immatures. 293 banded and marked with plastic streamers on each wing (blue on right wing and white on left) 2 band returns also marked with streamers).

7 ✓
February 13, Hackman: blood sampled 25 Greater Frigatebirds...The Greater Frigatebirds are on fresh eggs in the main colony and in the smaller colonies that are located in the interior along the south end of the lagoon. There are few nestling frigatebirds on the island.

8 ✓
May 30-June 1
Sibley Summary: 30 blood samples, 3 collected. 825 nests with eggs, 952 with young. Estimated 4000 birds.

8 ✓
Sibley - species account : May 30 - nest count southern third of island (i.e. south from lighthouse around to area on east shore opposite house) 173 nests with eggs, 185 with small young, 18 with large young plus 11 other nests

8 ✓
May 31: - house to frigate colony count - 78 nests with eggs, 60 with small young
90 with large young.

May 31 - Sibley, species account: Count of frigate colony - 566 nests with eggs,
373 with small young, 134 with large young.

8 Count ~~of~~ from Frigate colony to Guano heap: 8 nests with eggs, 33 with small
young, 22 with large young.

Two birds with a white streamer on the left wing and a blue streamer on the
right wing seen.

9 Oct 1-3, 1965 - (Fleet) nest count { egg - 47
sm. nestl - 346
lg. nestl - 331

11 " (BAH) - common breeder in bushy areas
near the guano.

11 (Repler) - Banded (25) - great numbers
seen flying over island.

SIC 11

GREAT FRIGATE

Enderbury Island.

Feb 15, 1966 - Crossin - concentrated in one colony on W side of island in the Messerschmidia grove. About ± 5000 in colony - but island pop. probably between 3-4,000. $\frac{2}{3}$ of pop. appear to be immatures. Most adults are starting their new nesting cycle. 75 nests present in main colony - 50 of these had fresh eggs. All nests built in Messerschmidia bushes. (9) nests present in south end of the island built on Sida clumps only a few inches from the ground. All contained fresh eggs.

total	317	129	59	505

Estimated 1500 adults.

6
 Nov. 9-12, 1964 -----Sibley summary: "2 collected, 20 blood samples. 63 adults, 35 immatures and 225 nestlings banded. 44 adult and 24 immature returns. Estimated 800 birds on the island. 34 nests with 1 egg, 29 nests with small young, 229 nests with large young."

ENDERBURY

RED*FOOTED BOOBY

February 12-16, 1965 - Hackman, Summary : 185 nests with eggs, 150 nests with young. 369 banded, 248 returns. Estimated 1200.

7 February 12 - Hackman (species accounts): 320 nests (185 with eggs, 150 with chicks).

Nests on Enderbury contained fresh cuttings of Cordia, both blossoms and leaves.

May 30-June 1, 1965 - Sibley, Summary: 20 blood samples. 159 banded, 129 returns. Estimated 1000-1200 adults. 202 nests with eggs, 189 with young.

May 30, 1965 - Sibley (species accounts) - "southern colonies" 1 egg (94)

8 small young (32), large young (123). 20 blood samples, 8 returns.

May 31, 1965 - Sibley (species account): Nest count completed.

"Great Frigate colony area - 1 egg (66), small young (5), large young (15).

Guano heap colony " - 1 egg (42), small young 6), large young (8). Banded the above two colonies after dark. 17 nestlings, 12 immatures, 2 subadults and 128 adults banded. 90 adult, 22 immature and 9 subadult returns.

9. Oct 1-3, 1965 (Fleet) nest count {
 - 1 egg - 121
 sm. nestl. - 21
 one adult defended {
 its nest when approached. }
 lg. nestl. - 178

" " (BAH) - A very common breeder in the presently bush covered areas as well as in areas with dead bushes. One adult was seen a great frigate nestling.

SIC 11

Red Footed Booby

Enderbury Island

Feb 15, 1966 (Crossin) - present in three different concentrations - ① SE side of lagoon

② W side of lagoon in Messerschmidia grove, mixed with Great Frigates (450 present here)

③ only about 25 pair had nests all with eggs.

④ third small group of 100 birds in Cordia grove. 12 nests with eggs present.

ENDERBURY

Audubon Shearwater

6 November 10, 1964 ----Sibley: "Two seen at dusk coming ashore."

February 12-16, 1965 --- Hackman, summary: Four birds seen (1 collected, 2 banded) on the guano pile on north end of island.

7 Woodward - Feb. 16, 1965 --- I found one Audubon's on top of the pile.

Feb. 13, 1965 --- Huber banded 1 Audubon's Shearwater and collected one.

May 30 - June 1, 1965 --- Sibley, summary : Two seen.

8 May 31, 1965 - Sibley: Two seen at 1900 over west side of island.

none seen on trips 2, 3, 4, 5, 11

9 Oct 1, 1965 (Kepler) saw one while on watch (0800-0900)
